

Tester: Kelly Nzale

Sprint: Sprint 1

Feature: Travel Inquiry Form + API

Environment

Date tested: March 7, 2026

Tester: Kelly Nzale

Frontend URL: <https://nateedralin.github.io/wwscrmtest/>

Backend URL:

Browser: Chrome

TC ID	Scenario	Input Data	Expected Result	Actual Result	Pass/Fail	Screenshot?	Notes/Bugs
TC-01	Happy path valid	Name, Email, Phone, Destination, Start, End, Travelers, Budget, Notes all valid	Form submits successfully. A POST request with JSON payload is sent to the backend. Backend returns HTTP 200 and success message appears.	Form submitted and a POST request was attempted. The server returned HTTP 405 because the backend endpoint is not configured yet. The form displayed the error message "Server error. Please try again."	FAIL	Yes	Backend endpoint is not configured yet ("YOUR_BACKEND_ENDPOINT"), causing HTTP 405 error.
TC-02	Missing Name	Name blank; others valid	Inline "Name is required." No POST	Browser displayed validation message "Please fill out this field." Submission was blocked and no request was sent.	PASS	Yes	Validation handled by browser built-in required field check.

TC-03	Missing Email	Email blank	Inline "Email is required." No POST	Browser displayed validation message "Please fill out this field." for Email. Form submission was blocked and no request was sent.	PASS	Yes	Validation handled by browser built-in required email check.
TC-04	Invalid Email	Email = kellygmail.com	Inline "Enter a valid email address." No POST	Browser displayed validation message: "Please include an '@' in the email address. kellygmail.com is missing an '@'." The form submission was blocked and no POST request was sent.	PASS	Yes	Email validation handled by browser built-in HTML email field validation
TC-05	Missing Destination	Destination blank	Inline "Destination is required." No POST	Browser displayed validation message "Please fill out this field." on the Destination field. Form submission was blocked and no POST request was sent.	PASS	Yes	Validation handled by browser built-in required field validation.
TC-06	Missing Start Date	Start blank	Inline "Start date is required." No POST	Browser displayed validation message "Please fill out this field." on the Travel Start Date field. Form submission was blocked and no POST request was sent.	PASS	Yes	Validation handled by browser built-in required field validation.
TC-07	Missing End Date	End blank	Inline "End date is required." No POST	Browser displayed validation message "Please fill out this field." on the Travel End Date field. Form submission was blocked and no POST request was sent.	PASS	Yes	Validation handled by browser built-in required field validation.
TC-08	End date	Start 3/25;	Inline "End	Form displayed	PASS	Yes	Custom date

	before start	End 3/20	date must be after start date." No POST	validation message "Your start date must be before end date." below the submit button. Form submission was blocked and no POST request was sent.			validation correctly prevents invalid date ranges.
TC-09	Travelers = 0	Travelers 0	Inline "Travelers must be greater than 0." No POST	Browser displayed validation message "Value must be greater than or equal to 1." when Travelers was set to 0. Form submission was blocked and no POST request was sent.	PASS	Yes	Traveler field correctly enforces minimum value of 1 using numeric input validation.
TC-10	Travelers too high	Travelers 999	Inline "Enter a reasonable number." OR backend 400 + banner	When entering 999 for the number of travelers, the form displayed the validation message: "Number of travelers must be between 1 and 20." Form submission was blocked and no POST request was sent.	Pass	Yes	Traveler field correctly enforces range validation between 1 and 20.
TC-11	Budget negative	Budget -100	Inline "Budget must be a positive number." No POST	When entering -100 for the budget, the form allowed submission and attempted to send a POST request. The backend returned HTTP 405 and displayed the message "Server error. Please try again."	Fail	Yes	Budget field allows negative values and does not enforce positive number validation.
TC-12	Backend returns 400	Valid-looking form but backend rejects	Banner shown with backend error	Backend endpoint is not yet implemented. Request returned HTTP 405 instead of 400. Unable to fully test backend validation at this time.	Blocked		Will be re-tested once backend API from Task 5 is implemented.

TC-13	Backend offline / 500	Stop backend or wrong URL	Banner shown “Try again later”	When the form attempted to submit data, the backend request failed (HTTP 405). The form displayed the alert message “Server error. Please try again.”	Pass	Yes	
TC-14	Double-submit prevention	Double-click submit	Only 1 request sent	When clicking Submit Form multiple times quickly, the form sent multiple POST requests to the backend endpoint. Two requests appeared in the Network tab.	Fail	Yes	Submit button does not disable after first click, allowing duplicate submissions.

Error UX Requirements

The Travel form should display clear validation messages to guide the user when incorrect input is provided.

Inline Field Errors

Name

Name is required.

Email empty

Email is required.

Email invalid

Enter a valid email address.

Destination

Destination is required.

Date error

End date must be after start date.

Travelers

Number of travelers must be greater than 0.

Budget

Budget must be a positive number.

Overall Form Error (Backend Failure)

If the backend API returns an error, the form should show a message at the top of the page:

Example:

Unable to submit travel request. Please try again later.

or

We could not process your request. Please check the form and try again.

Bug Reporting

During testing, issues discovered will be recorded and reported in Jira.

Issue 1 : Backend endpoint not configured**Steps to Reproduce**

1. Fill the travel inquiry form with valid data
2. Click Submit

Actual result

Form returns HTTP 405 error and displays "Server error. Please try again."

Expected result

Form should successfully send data to the backend API and return HTTP 200.

Notes

Backend endpoint is currently set to "YOUR_BACKEND_ENDPOINT", which indicates the API is not connected yet.

Issue 2 — Budget field allows negative values

Steps to reproduce

1. Fill the travel inquiry form with valid data
2. Enter **-100** in the Budget field
3. Click Submit

Actual result

Form submits successfully and attempts to send the request to the backend.

Expected result

Form should display a validation error such as:

Budget must be a positive number and block submission.

Issue 3 — Duplicate form submission allowed

Steps to reproduce

1. Fill the Travel Inquiry Form with valid data
2. Click Submit Form multiple times quickly

Actual Result

Multiple requests are sent to the backend.

Expected Result

The Submit button should disable after the first click to prevent duplicate submissions.
